

DASL 130 – C Programming Course

Assignment 3

Due July 29th at 10 AM

1) Create a program using a function that takes two pointers as inputs and swaps their contents. Show from main() that the switch has occurred properly. Comment the program to explain how it works.

2) Create a program with a function that takes a pointer to an array and the size of the array as arguments. It should reverse the order of the elements within the array. Print the values in the array both before and after the switch. Comment the program.
